ChatBots: 4 Real Use Cases Beyond Hype

FEELING THE BUZZ AROUND GenAI?

GenAI is transforming the AI landscape in unprecedented ways, yet many enterprises struggle to grasp its practical value or know where to begin.

At Chaperone AI, we are dedicated to democratizing GenAI. We offer a state-of-the-art suite of privately hosted large language models (LLMs), meticulously crafted for domain-specific products and services tailored to enterprise needs. Our expertise lies in providing highly customized, fine-tuned LLMs that are securely hosted in our EU-based datacenter, ensuring full GDPR compliance.

Designed to handle tens of thousands of calls, our models come with a flat-rate pricing model, making enterprise AI adoption both scalable and cost-effective. Leveraging retrieval-augmented generation (RAG), our domain-specific LLMs deliver the most accurate responses, grounded in your organization's unique data.

Unlock the full potential of your business with our multi-agent GenAI solution, built to seamlessly manage complex tasks, enhance efficiency, and empower intelligent decision-making at scale. We're excited to present four use cases that showcase the true potential of Chaperone's AI-powered chatbots. From transforming customer support to streamlining internal operations, these examples demonstrate the powerful impact GenAI can have on your enterprise.
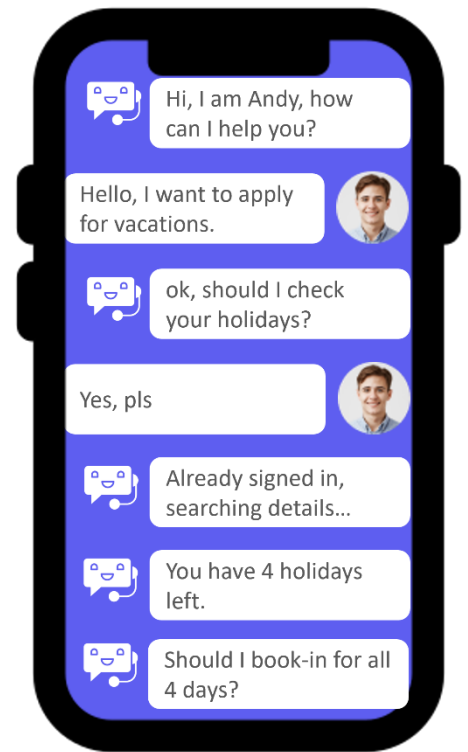

4 USE CASES FOR GENAI-POWERED CHATBOTS

★★★ 1. **Customer Service**

By connecting AI to your company's data, GenAI-powered chatbots offer customers a personal assistant that delivers customized responses and recommendations. They can efficiently manage tasks like updating personal information, providing a smooth, human-like interaction that elevates the customer experience.

2. **Sales and Marketing**

An enterprise-ready GenAI that connects with your CRM and website data can offer intelligent, personalized product or service recommendations, handle upsells, cross-sells, and even create orders directly within the chatbot—boosting revenue and increasing conversion rates. This seamless integration enhances customer engagement, providing a more efficient and satisfying buying experience.

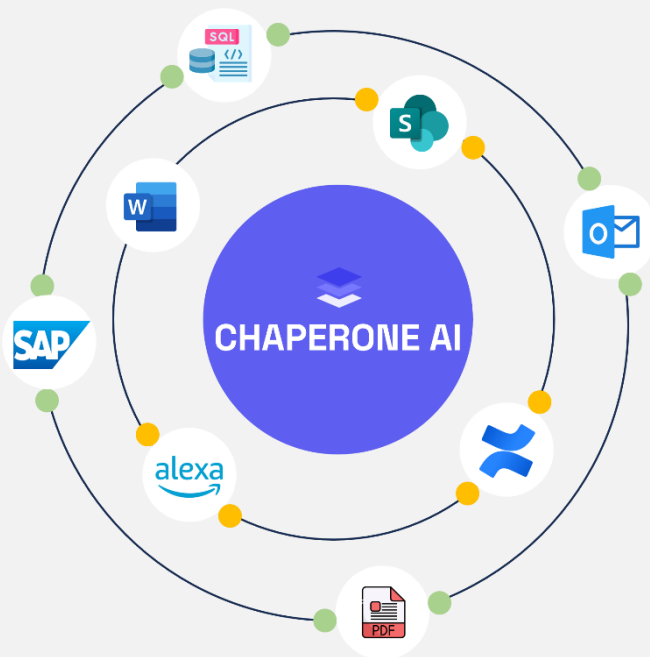

Hi, I am Andy, how can I help you?

Hello, I want to apply for vacations.

ok, should I check your holidays?

Yes, pls

Already signed in, searching details...

You have 4 holidays left.

Should I book-in for all 4 days?

3. **Knowledge Management**

Our solution pulls data from your existing knowledge management tools, core systems, and internal company resources. This information is fed into Self-hosted LLMS, enabling it to deliver relevant and accurate answers to employees in real-time. This streamlines workflows, supports better decision-making, and boosts employee satisfaction.
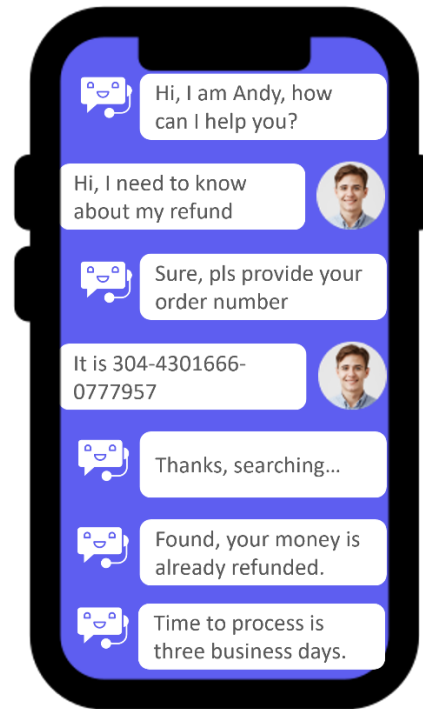

4. **Digital Co-worker**

An enterprise-grade LLM-Suit can automate HR, IT, finance, and procurement support by providing personalized responses to employee queries through a digital co-worker that leverages GenAI to aggregate and utilize your company's data effectively.

CHAPERONE AI

THE FEUTURE OF CONVERSATIONAL AI THROUGH CHAPERONE AI

Transform your customer and employee support with a GenAI Bot powered by privately hosted LLMs, and multiagent systems seamlessly integrating with your company's data and systems while ensuring secure, authorized access only.

This advanced solution elevates user experience by deploying bots with a deep understanding of queries, capable of processing information in context and autonomously managing tasks such as order creation, inquiry, and refunds. By integrating AI technology with your organization's data, you can unlock exceptional support capabilities and deliver top-tier service to both customers and employees.

Customer Satisfaction 😊

Increased Revenue

Reduced Operational Cost
